

Abhijit Kolekar

Summary

With over three years of experience in the IT industry, I have developed a strong foundation in software development with expertise in C# .NET Full Stack and C++. Alongside building scalable web applications and backend systems. I am a proactive and collaborative team player with strong communication skills, enabling me to work effectively within cross-functional teams and contribute to successful project outcomes. I am continuously upskilled in emerging AI technologies and modern development practices. I am passionate about leveraging AI to build innovative, impactful, and future-ready software solutions.

Objective

To leverage and enhance my technical knowledge and skills within a progressive, growth-oriented organization where I can contribute effectively while continuously advancing my capabilities. I aim to take on challenging opportunities that foster professional development, strengthen my expertise, and enable me to build a successful, long-term career.

Technical Skills

Environments	Windows, Linux
Languages	C#, C++, JavaScript, TypeScript, Shell Scripting
Front-end	HTML5, CSS3, Angular
Back-end	.Net Web API
Database	SQL Server, Mongo, Elastic Search
Management Tools	Git, GitHub
Development Tools	Visual Studio, VS Code, Eclipse
Other Tools	RabbitMq, Kafka

Professional Experience

GEP

Duration: Apr 2025 – Till date

- Contributed to multiple enterprise applications – Delta Migration Tool, Common Master Data and Partner Portal.
- Introduced a packaging-based migration approach in DMT, enabling users for structure migrations.
- Worked on microservices architecture with Kafka based communication, Elastic Search for search and MongoDB for data persistence.
- Implemented Bulk and long running asynchronous process using worker process.
- Build an AI-Powered Agent for DMT to automate migration tasks, domain summaries and enhance user experience.
- Provided production release support ensuring smooth deployments and issue resolutions.

CitiusTech Healthcare Technology Private Limited

Duration: Jul 2022 – Apr 2025

- Designed and implemented web APIs to enable smooth communication.
- Utilized Angular framework to develop a user-friendly interface
- Developed an efficient IPC Message Queue Mechanism to facilitate seamless communication
- Performed code analysis, documented the code understanding with detailed workflow and sequence diagrams.
- Contributed to enhanced code coverage by developing and executing comprehensive unit test cases, ensuring high-quality software delivery.

Educational Background

Degree	School/College	Board/University	Year of Passing	Percentage/CGPI
B.E Electronics and Telecommunication	Vidyalankar Institute of Technology	University of Mumbai	2022	9.05
H.S.C	D.G. Ruparel College	Maharashtra Board	2018	75.69%
S.S.C	Theresa High School	Maharashtra Board	2016	83.20%

Final Year Project

Project	Face Detection & Recognition
Summary	The face is one of the easiest ways to distinguish the individual identity of each other. Face recognition is a personal identification system that uses personal characteristics of a person to identify the person's identity. Here, we are detecting and recognizing faces from an image using Python OpenCV. OpenCV is huge open-source library for the computer vision, machine learning, and image processing
Main Technologies	Python
Responsibilities	▪ Understood the requirement. ▪ Converted requirement into the project plan. ▪ Designed code under the guidance

Internship & Training

Jetic Healthcare Private Limited (Pepodeal)

Duration: Dec 2019 – Jan 2020

Certificate course in Python by Udemy

Declaration:

I hereby declare that above written statements are true, complete and to the best of my knowledge.
